TypeScript, JavaScript (ES6+), React, Redux, React Native, AngularJS, LESS, CSS Modules, CSS-in-JS, Webpack, NodeJS, Express, Koa, GraphQL, Mocha, Chai, Jest, Karma, Lighthouse, Sequelize, MongoDB, Redis, PostgreSQL, Firebase, Docker, Git, SCRUM

LANGUAGES

English: Intermediate
Russian: Native

WORK EXPERIENCE

Mar 2019 – **Backend Developer**

Present EPAM Systems / Adidas

Frontend gateway creation for the company's official AppStore and Google Play market application.

I'm working as a team member of a product team and responsible mostly for LAM countries markets rollouts, which includes: payment methods set up, localization, backed infrastructure configuration.

Achievements:

- reduced TTI of checkout process for 15% by API migrating
- increased code deploy speed and start by cleaning up unused parts of the code in production containers
- improved code readability by refactoring some legacy code parts

Jan 2019 – **Frontend Developer / Key Developer**

Feb 2019 EPAM Systems / Some financial service

Proof of Concept for technological researches program for one of the biggest Russian banks.

I was responsible for creating a visual management tool for investigation of a big amount of financial companies and entrepreneurs and positive/negative news, related to them.

Achievements:

- increased maintainability of the project by migrating existed prototype from Vanilla JS to React
- improved UX by picking up an appropriate color palette and theming
- implemented a solution for graph performance optimizations by extending existed graph management solution

Aug 2017 – **Frontend Developer / Sub Team Lead**

Dec 2018 EPAM Systems / Some financial service

Development of the business-critical system of Agency in the housing and mortgage markets.

Whole application flow was based on the complex business process which our team was responsible for creation.

Achievements:

- increased DX and project maintainability by the initial environment and CI setting, creating style guides and developer documentation
- improved code reliability and readability by rewriting application with Typescript
- improved UX by researching in the scope of various Frontend performance issues and by making improvements in bundle and runtime code optimizations based on the audit
- implemented several features that made the working process more user-friendly and automated for the customer

Also, I got experience of partially leading a team of 3 people.

EDUCATION

Sep 2013 – Aug 2018

Specialist of Applied and Computational Mathematics

Ryazan State Radio Engineering University

CONTRIBUTION & VOLUNTEERING EXPERIENCE

Nov 2018 – Present

Students trainer

EPAM Systems & WebPurple

Participated in the process of providing students basic knowledge of Frontend development. Created education materials, led lectures and practice lessons

Mar 2019 – Jun 2019

React Global Program Mentor

EPAM Systems

Helped to improve ReactJS stack experience for mentees, prepared them for production work

Dec 2016 – Mar 2017

Open Source Frontend Developer

WebPurple 

Participated in the development and maintaining of the web-based community site. Made improvements in testing approach, participated in the design and features planning and allocation

INTERESTS

Open Source, FP, Product Management, Systems Architecture, Mobile Development, Microservices, IT Conferences, Travelling, Football, Foreign Languages

Feb 2018 –

Fullstack Developer / Key Developer

Jun 2018

EPAM Systems / Internal project

The aim of the project was to create an MVP of the using rooms booking and scheduling system.

I was only one developer on this project and was responsible for the leading through the whole process, i.e. planning, estimation, developing and delivery.

As a result, I created a system which included multiplatform mobile application and the gateway between it and MS Exchange API. The project was delivered on time and satisfied all acceptance criteria.

Mar 2017 –

Frontend Developer

Jun 2017

EPAM Systems / Some Canadian WFM Company

Extension of employee scheduler component in a platform for compensation planning, time and attendance, absence management, payroll and more.

Basically, I was responsible for app maintenance, i.e. fixing complicated and difficult to find bugs, suggest ideas to process automation and performance improvements.

Achievements:

- refactored legacy parts of code with the aim of improving application performance
- integrated Coverall tool to improve understanding of code coverage amount

Oct 2016 –

Fullstack Developer

Mar 2017

Freelance

Various little projects for Ryazan's companies in construction, repair, housing industry.

I worked in a small team that was responsible mostly for static sites and landing pages creation. Also, I was responsible for communication with customers.

Achievements:

- reduced cost and time of development by introducing and integrating CI/CD in the development flow
- increased maintainability and reliability by performing more than 70% code coverage with testing tools for each project on - average
